

Templates have been created for each structure. In order to avoid additional layout charges or costly reprints, please use these templates and the checklist.

file preparation:

- File is on template
- Place file on template for me (chargeable)

(do not alter locked layers of the template)

Artwork was created (application)

(application, version).

Artwork was saved in (application)

- 1 1/2" bleed on all sides
(resultant file is 3" larger than finished fabric)
- all text on front panel is 3" from finished edge.
- text is converted to outlines or rasterized
- fonts are supplied : names:

- transparencies are used in this file (file will be flattened during the RIP and could affect printing PMS specifications)
- File is 100 dpi at full size (lower dpi may affect print quality)
- all links to the artwork layer are included
- all artwork is on the artwork layer of the template and saved as an .ai file
- all files are saved with legal extensions to verify file format
- placed .psd files in illustrator (placing .psd files to avoid drawing a clipping path may not be accepted by the RIP and could result in additional charges)
- gradients should be rendered in Adobe Photoshop for best results.
- a layered file is supplied
- file contains images to print Black and White

general information that will improve the quality of your finished product:

The templates are an editable pdf file. See using Templates on the next page

Do not use embedded files.

Due to the stretch of the fabric, we can not guarantee exact centering of type on the end caps. Keep type 3" from the finished edge

submission

- Files are stuffed and uploaded to ftp site:
Folder/file name: _____
